

Waste Minimization

The waste minimization program focuses on reducing the amount of waste generated and recycling or repurposing materials to the greatest extent possible. Although the program focuses on all Port of Portland facilities, Portland International Airport is the Port's largest waste generator. Recycling, composting, tenant outreach programs and innovative solutions such as liquid collection stations at security checkpoints and a food donation program have greatly reduce the amount of material going to landfills. The program also focuses on reducing the use of hazardous materials.
